

ASL951BL Be-Tech Indoor Bluetooth Lock

Ideal for:-
Hotels, residential accommodation, universities, colleges, schools, offices, and hospitals.

The Be-Tech ASL951BL range is a wire free, intelligent Bluetooth lockcase which is programmed via your own router and the Be-Tech cloud software.

Seamlessly manage your premises, via your online cloud database, which can be accessed on most devices with internet connectivity. Use your platform to issue “mobile keys” to staying guests and view room status.

Staying guests are required to download the Be-Tech Mobile Key App and register their email address to receive time and date sensitive “mobile keys” within the application.

Both lock case and control board with battery pack are morticed into the edge of the door with access to the battery pack via the forend, removing the requirement for heavy hardware installed onto the door. The unit comes complete with a white or black reader cover with a LED confirmation light.

Stock Code	Description
