

AQ050-20 Wall Lamp Wi-Fi Camera

Replace your outdated security lights with this great LED light Camera the Wi-Fi HD camera with motion detection offers two-way communication as well as a motion-activated light and siren. See, hear and speak to people on your property via your mobile phone. Shine the light and sound the siren on suspicious activity.

When surveillance videos can't satisfy you, we provide you real-time two-way audio. The camera has built with microphone and speaker. So you can listen or talk via your smartphone remotely whenever a situation arrives.

When the camera detects that someone has intruded into the surveillance area, the LED lights automatically illuminate and the camera emits an alarm sound. When motion is detected the camera will save the footage into the TF card without missing any important events. You can even ensure that false alarms are avoided by setting the motion detection "mask" to block areas with constant movement.

Features & Benefits
